

just before his death at the age of 89, if Earth Day should be celebrated. "Our work is not finished," he replied. "There's a lot more that needs to be done."

As we enter wildfire season, watershed infrastructure that would mitigate future contamination of local rivers and reservoirs is still being rebuilt from last season, and funding for rebuilding is only now being allocated, having been delayed under sequestration, affecting lives and homes.

We've yet to craft an agenda that talks of a multiyear transportation plan or climate change. And, of course, the green legislator at heart would love to see tools like the Antiquities Act as a job-creating mechanism rather than spending time on the floor fighting against rolling back NEPA as we're doing this week with H.R. 678, unnecessarily, at the expense of supporting hydropower, as we should.

No, our work is not finished. There's a lot more to be done.

MOVING FORWARD WITH LIQUEFIED NATURAL GAS

(Mr. BOUSTANY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BOUSTANY. Mr. Speaker, in 2009, the United States surpassed Russia in becoming the world's largest producer of natural gas. Due to recent technological advancements, large deposits of natural gas, mainly shale gas, are now being harvested. Through the use of hydraulic fracturing and horizontal drilling, previously inaccessible hydrocarbons are now seeing the light of day.

Having Henry Hub located in the center of the Third Congressional District, I'm fully aware that the market price of U.S. natural gas is at an all-time low and much lower than Asian and European natural gas prices. While this fact presents challenges, it also provides an opportunity for our Nation to fast become a global energy hub by exporting one of our most abundant natural resources in the form of liquified natural gas, or LNG.

With domestic demand being met, exporting LNG leads to job creation at home, a reduction in the national trade deficit, and an increase in revenues for the Federal Government. As a member of the House Ways and Means Subcommittee on Trade, these are all value-added benefits for our Nation.

The domestic natural gas boom presents the United States with an enormous economic opportunity and geopolitical opportunity. Our Nation should seize this opportunity and not let it pass. It's in the public interest.

INVEST IN AMERICAN MANUFACTURING

(Mr. HIGGINS asked and was given permission to address the House for 1 minute.)

Mr. HIGGINS. Mr. Speaker, this week I took part in a town hall meeting in Buffalo, along with the Alliance for American Manufacturing, and discussed the importance of manufacturing jobs to our region and to our Nation.

With western New York's dedicated workforce and history of manufacturing success, we are ready to grow our economy with the resurgence of advanced manufacturing industry. But to do this, our workers and businesses need a willing partner in their government.

This Congress must make investing in our infrastructure and investing in our people top priorities. Robust funding to rebuild roads and bridges, along with fostering job-training programs and passing legislation in the House Democrats' Make It In America agenda, will enable us to compete with any other nation in the world.

Mr. Speaker, investing in American manufacturing creates jobs and reduces the deficit. There is much work to be done, and there are Americans who need the work.

THE GOVERNMENT ACCOUNT- ABILITY OFFICE'S REPORT ON WASTE

(Mr. FORTENBERRY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FORTENBERRY. Mr. Speaker, we engage in so much Washington speak in our debates—words like "sequestration," "continuing resolutions," and "debt ceiling"—that the structure of our debates, I feel, can be off-putting to many Americans. So let's try to be a little more straightforward.

The reality is that we have a huge mismatch between revenues and expenditures. We all know that this is a struggle, but we have to get our fiscal house in order, just like American families do, businesses do and even local governments do; but instead of hashing through the same old debates, perhaps there is an easier way forward.

Right here, Mr. Speaker, is a Government Accountability Office report that came out this week. It's a new report that builds upon former reports. There are more than 300 areas in which we can tackle redundant spending across the Federal Government. So here is the right place to start, Mr. Speaker—in delivering a smarter and more effective government while also saving money.

GUN REFORM

(Mr. MORAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MORAN. Mr. Speaker, throughout the United States, in red and blue States alike, we have speed limits for

travel on public roads. These laws are good public policy because they prohibit behavior that can endanger the lives of others. But imagine if we blocked our police from using speed detection devices so they could never prove that you were speeding or if we only allowed the use of those devices on certain roads. Such a policy would make speed limits mere suggestions with no consequences for those who would violate the law.

It sounds ridiculous, but this is exactly the strategy we currently use to prohibit the purchase of firearms by criminals and those with serious mental illness. Federal law bans the purchase of guns by dangerous people, but massive loopholes in our background check system permit at least 40 percent of purchases to evade the law without detection by law enforcement.

The NRA and its supporters often claim that we need to enforce the laws on the books. Agreed. Universal background checks are designed to do just that—to provide an actual enforcement mechanism. That's what the Congress should require because 90 percent of the American public wants us to do at least that.

SITTIN' ON THE DOCK OF THE BAY

(Mr. JORDAN asked and was given permission to address the House for 1 minute.)

Mr. JORDAN. Mr. Speaker, this week, the President hosted a star-studded concert at the White House for his friends, featuring the music of Otis Redding and others. One of Otis Redding's lines in his "(Sittin' on) the Dock of the Bay" sums up my thoughts on the President's budget: "Looks like nothing's gonna change. Everything remains the same."

Just like the Senate, the President's budget raises taxes, increases the debt and never, ever, ever balances. The Obama budget has a trillion dollars in new taxes on top of the trillion-dollar ObamaCare tax and the \$600 billion "fiscal cliff" tax from earlier this year. The Obama budget spends \$46 trillion, borrows another \$8 trillion, and increases the national debt to \$25.4 trillion over the next 10 years. Then, after all those taxes and all that spending, we still have a budget that never, ever, ever balances.

Mr. President, we can't borrow forever. We can't keep spending more than we take in. These problems are staring us right in the face, but the big spenders in Washington are just sittin' on the dock of the bay, wasting time.

NEW JERSEY'S LIFE SCIENCES CONTRIBUTIONS TO THE COMMU- NITY

(Mr. SIRES asked and was given permission to address the House for 1 minute.)

Mr. SIRES. Mr. Speaker, I rise today to commend the contributions of the
